Mental Health Days:
When Taking One Actually Helps

A day to pause, reset and take care of your mind so you can show up better for what matters.

1 Active Recovery vs. Avoidance

A mental health day is most helpful when it's a intentional reset, not just escape or procrastination.

Active Recovery (Usually Helpful)

- ✓ You feel mentally or emotionally depleted
- ✓ You intentionally rest and do nourishing activities
- ✓ You feel calmer, clearer and more like yourself after
- ✓ You return with better focus and energy

Helps you recover and come back stronger.

Avoidance (Not as Helpful)

- ✗ You use it to avoid specific tasks or responsibilities
- ✗ You spend the day mostly scrolling or numbing out
- ✗ You still feel anxious, guilty or drained after
- ✗ It becomes a regular pattern to escape stress

Doesn't solve the real problem and can increase stress over time.

2 3 Key Rest Focuses

A good mental health day supports rest on multiple levels – body, emotions and mind.

Sensory Rest

Give your senses a break from constant stimulation.

- Spend time in nature
- Enjoy a calm, quiet space
- Reduce screen time
- Listen to soothing music

Emotional Rest

Allow yourself to feel, process and release.

- Journal your thoughts
- Talk to a trusted person
- Do something that brings you joy
- Be kind to yourself

Cognitive Rest

Give your mind a break from constant thinking.

- Step away from work and problem-solving
- Try a mindful activity like reading or a hobby
- Spend time doing something simple and enjoyable

3 Boundary Protocol Checklist

Set a few clear boundaries to make your mental health day truly restorative.

1. **Step Back from Work**
   Turn off non-urgent notifications, set an auto-reply if needed, and avoid checking emails. ☐
2. **Protect Your Time**
   Say no to non-essential commitments and keep the day focused on your well-being. ☐
3. **Choose Restorative Activities**
   Plan a few simple, nourishing activities in advance so you're not just defaulting to aimless scrolling. ☐

4 Low-Friction Re-Entry Plan

Ease back into your routine with a gentle plan so the benefits actually last.

Step 1 — **Start Small**
Begin with 1–3 key tasks, focus on what's important, not everything at once.

Step 2 — **Keep the Momentum**
Carry one small habit from your mental health day into the week (e.g., a short walk, 10 minutes of mindful breathing or a no-screen evening).

A mental health day isn't a luxury — it's a practical way to protect your well-being and be a kinder, more present version of yourself.
